

SOLUTION BRIEF

WITH INTERCLOUD, GET THE MOST OUT OF YOUR CLOUD APPLICATIONS

INTERCLOUD EMPOWERS GLOBAL COMPANIES TO DELIVER THEIR CLOUD RESOURCES IN A FAST, RELIABLE AND SECURE WAY

As companies move their IT resources to the Cloud, they realise that an effective Cloud strategy cannot succeed without appropriate and secure connectivity. InterCloud makes access to Cloud applications for multinationals easier and more reliable. Over 50 of them have placed their trust in InterCloud to deliver an appropriate solution to satisfy security and compliance needs in relation to the hybridisation of their business applications. By providing flexible, reliable and seamless Cloud access, InterCloud ensures that companies retain absolute control over their applications.

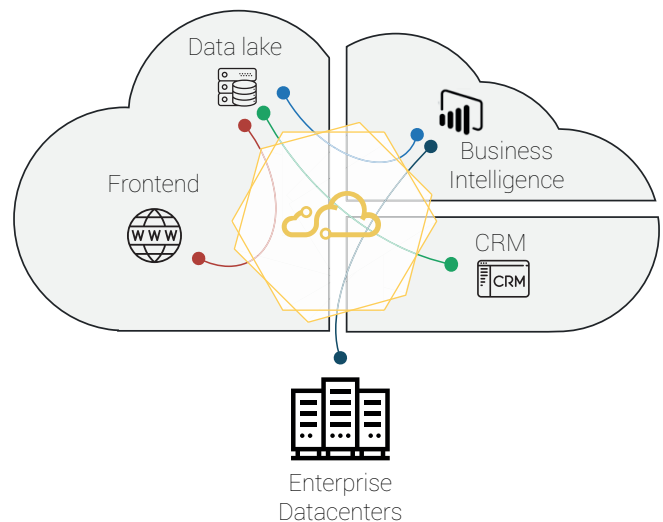

That is why Microsoft, a major Cloud leader, has opted for InterCloud's platform.

WHAT IS THE INTERCLOUD PLATFORM

The InterCloud Platform is an application-aware platform offering private access to any cloud provider, securely and efficiently delivering cloud applications wherever they may be required.

InterCloud Platform is physically connected to all major Cloud providers. This private network is completely isolated from all public networks, making it impervious to any of the cyber-attacks typically experienced by services running on the internet.

It provides security, visibility and optimisation services which enable businesses to shape their cloud strategy to better meet their users' requirements and improve their experience.

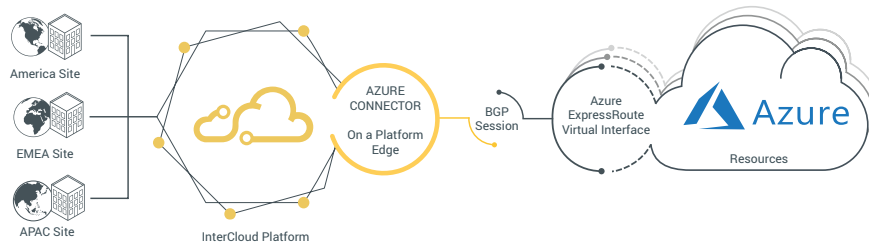

THEY TRUST US

GET TO AZURE WITH INTERCLOUD

As an Azure ExpressRoute partner, InterCloud makes it easy to establish a dedicated access from infrastructure premises to Microsoft public and private cloud resources across all regions.

Through the InterCloud platform, IT organizations can globally deliver Microsoft cloud resources and services to corporate users while ensuring user experience, compliance and reliability requirements are maintained.

WHY INTERCLOUD?

- Native support and integration with Azure ExpressRoute
- Worldwide ExpressRoute coverage with America, Europe and Asia locations
- Dedicated layer 3 connectivity to Microsoft Cloud with SLA-backed performance
- Traffic segregation business model enabling connectivity as a service
- Complementary networking services to secure and optimise Cloud application flows
- Trusted by global large companies as a key enabler for their digital transformation

"You cannot have a first-class cloud without a first-class network".

Yousef Khalidi, Microsoft Corporate Vice President

USE CASES

Private access to Azure

Guarantee the confidentiality and integrity of your data when they travel from your premises to Azure.

Hybrid cloud

Guarantee seamless communication of your hybrid environment. The application flows between Azure and Azure Stack are optimized for performance, security and reliability.

Cloud to cloud

Simplify traffic exchange between your secure virtual environment such as Azure VNet and another cloud provider.
